To Whom It May Concern:

The Pikes Peak Cog Railway has been in existence for well over 100 years. Our goal is to co-exist with our neighbors and cause as little disturbance as possible. In the last few years, several neighbors have complained about the smoke and diesel emissions produced by the locomotives, as we begin our trips up Pikes Peak. In an attempt to be a good neighbor, we have been searching for solutions to reduce the emissions on the locomotives, in order to keep our neighbors happy.

We began using Duralt Diesel Fuel Conditioner, distributed by fuel$AVER, inc. approximately one month ago. After close observation of the locomotives during that time, the smoke and diesel emissions have been greatly reduced. There is a small puff of smoke during acceleration and at start-up, but other than that, the smoke is barely visible. We will continue to use the Duralt Fuel Conditioner to reduce the diesel emissions on our locomotives. We recommend the use of this product for improvement of emissions to any railway or any vehicle with a diesel engine.

Very truly yours,

Steve Stanton
